Websites and web systems built around what your business actually needs, plus the add-ons that go with them.

SERVICES & PRICING

Single landing page — KES 8,700

One focused page built around a single offer: your proof, your results, and one clear way to reach you. Good for a launch or a campaign that doesn't need a full site, so you're online fast without paying for pages you don't need.

Company website — KES 14,000

A full site that explains what you do, shows your work, and gives people an easy way to reach you. Most customers check online before calling, so without a site you're quietly losing enquiries to competitors who do have one.

Website for consultants & professional firms — KES 11,900

Built to earn trust fast: your services, your credentials and client results laid out clearly, with an easy way to book a call. Consultants are judged on credibility before a client ever speaks to you, so a dated or missing site costs you serious enquiries.

Personal portfolio site — KES 8,700

One place for your work, your CV and your contact details, built around you, not a template. Freelancers get hired off the strength of their portfolio, so a site that shows your actual work wins more clients than a PDF CV ever will.

Website for churches, NGOs & community groups — KES 15,700

Share your programmes, events and news in one place, with an easy way for people to reach you or support you. Relying on social media alone means newcomers and donors have nowhere reliable to land, so a proper site gives them one.

Property listings website — KES 15,500

Searchable listings with photos and filters for every property, updated yourself from a dashboard whenever stock changes. Buyers filter online before they ever call an agent, so listings stuck on WhatsApp or a single PDF lose them before you know they looked.

Dealership showroom website — KES 14,700

A searchable online showroom for your stock, with photos and filters, updated by you whenever inventory changes. Buyers shop online first, so a dealership without a searchable site is invisible to anyone who's already moved on to a competitor they could find.

Online store — KES 14,000

Sell products, downloads or digital goods with a cart, accounts and online payments, with M-Pesa and card checkout added if needed. Selling through WhatsApp DMs alone caps how many orders you can actually handle, so a real store lets customers check out themselves, any time.

Appointment & booking website — KES 8,700

Customers pick a time and book themselves in, for a table, a room, a service or a tour, without a back-and-forth message first. Manually confirming every booking by phone or WhatsApp eats your day and loses the customers who give up waiting for a reply.

Online course platform — KES 12,700

Deliver lessons to enrolled students with their own accounts, progress tracking and structured content, instead of emailing files around. A shared drive link looks unprofessional and is easy to pass around for free, so a proper platform protects your content and your income.

Internal records system — KES 11,000

A private, logged-in system for your staff, clients and records, kept away from the public website entirely. Spreadsheets and shared folders get messy and risky fast, so a dedicated system keeps your records organised and visible only to the people who should see them.

Data dashboard & reporting site — KES 8,700

Your numbers turned into live charts and reports that update automatically as your data changes, instead of a spreadsheet someone rebuilds every week. Manually pulling reports together wastes hours and the numbers are already stale by the time anyone reads them.

Custom web mapping application — KES 8,700

An interactive map application built around your own data: locations, boundaries, routes or coverage, not a one-off static map image. A screenshot of a map can't be searched, filtered or updated, so once your data moves, your map is already wrong.

Custom web application — KES 10,500

Built around how your business actually works, for when nothing off-the-shelf quite fits what you need to run day to day. Forcing your workflow into a generic template means working around the software instead of the other way round, which costs time every day.

Professional email setup — KES 7,000

Email addresses on your own domain (you@yourbusiness.com), configured and ready to use on your phone and computer. A free Gmail or Yahoo address looks less credible to clients and makes it harder to tell business messages from the rest of your inbox.

M-Pesa checkout integration — KES 6,000

Added to your existing website or system so customers can pay by M-Pesa STK push without leaving the page. Provider and transaction charges are separate, and skipping this means customers pay manually and send a screenshot, which slows everything down and invites mistakes.

Card checkout integration — KES 11,000

Added to your existing website or system so customers can pay by Visa or Mastercard, including from outside Kenya. Provider and transaction charges are separate, and without it you lose customers, especially international ones, who simply don't have M-Pesa.

Domain registration (1 year) — KES 1,599

Your own web address (.co.ke, .com or another ending), registered and pointed at your site so it's ready to share. Without your own domain your site sits on a long, forgettable subdomain that looks unfinished and is hard for anyone to type or trust.

Monthly maintenance & support — KES 2,000

A month of fixes, updates and small changes once your warranty period has ended, so your site keeps working as it should. Websites need occasional updates as your business changes, and without ongoing support those requests pile up or go undone.

Website security review & hardening — KES 6,000

A check of your website or system for common weaknesses, with fixes applied and settings tightened where they're too loose. An unreviewed site is an easy target for automated attacks, and a breach can mean lost data, a defaced site or lost customer trust.

SEO & performance audit — KES 4,500

A review of your site's search visibility and loading speed, with a clear, prioritised list of what to fix first. A slow site or one Google can't find properly sends visitors, and potential customers, straight to a competitor who shows up first.

PAYMENT TERMS

- Orders totalling KES 10,000 or less are paid in full upfront to book the work.
- Orders above KES 10,000: 50% deposit to start, the balance is due on completion.
- Prices are fixed. Domain renewals, hosting upgrades, premium database services, paid third-party APIs and similar ongoing charges are not included.
- Typical delivery is 7–14 working days once requirements and any needed content are confirmed, unless noted otherwise per service.
